CASE NARRATIVE

Laboratory number:	174631
Client:	Treadwell & Rollo
Project:	2893.12
Location:	Presidio Baker Beach 3
Request Date:	09/14/04
Samples Received:	09/14/04

This hardcopy data package contains sample and QC results for six soil samples, requested for the above referenced project on 09/14/04. The samples were received cold and intact.

Pesticides (EPA 8081A):
High ICAL percent RSD (relative standard deviation) was observed for 4,4'-DDT in the calibration analyzed 09/02/04 21:44; average ICAL %RSD met method requirements, and affected data was qualified with "b". High response was observed for methoxychlor in the ICV analyzed 09/03/04 02:16; average ICV drift met method requirements, and this analyte was not detected in the associated samples. High response was observed for 4,4'-DDT in the CCV analyzed 09/16/04 12:22; average CCV drift met method requirements. Low surrogate recoveries were observed for TCMX in BB3EX124[0.5] (lab # 174631-002) and the method blank for batch 94601. No other analytical problems were encountered.

PCBs (EPA 8082):
No analytical problems were encountered.

Metals (EPA 6010B):
High response was observed for copper in the serial dilution samples analyzed 09/15/04 09:16 and 09:24. No analytical problems were encountered.

CASE NARRATIVE

Laboratory number:	174830
Client:	Treadwell & Rollo
Project:	2893.12
Location:	Presidio Baker Beach 3
Request Date:	09/22/04
Samples Received:	08/30/04

This hardcopy data package contains sample and QC results for one soil sample, requested for the above referenced project on 09/22/04. The sample was received cold and intact.

Metals (EPA 6010B):

Low recoveries were observed for antimony in the MS/MSD for batch 94861; the parent sample was not a project sample, the BS/BSD were within limits, and this analyte was not detected in the associated sample. High recoveries were observed for nickel; the BS/BSD were within limits. High RPD was also observed for nickel; the RPD was acceptable in the BS/BSD. High response was observed for beryllium in the serial dilution sample analyzed 09/23/04 07:59. No other analytical problems were encountered.

Subject: Additional metals analyses for Baker Beach 3

To: "Steve Stanley" <steve@ctberk.com>

Steve,

This email is a follow-up to your phone conversation of yesterday (or today?) with Mike Chamberlain regarding additional metals analyses that we need in order to interpret some of the results from Baker Beach Disturbed Area 3. In addition to the suite of 17 metals that C&T has been quantifying to date, please add iron (Fe) and manganese (Mn) to the list of metals for this project.

174320-003

As you discussed with Mike, we previously did not have you analyze sample BB3EX119 for metals, but would like to have this analysis done at this time, as quickly as possible (24 hr TAT, if at all possible). When analyzing this sample, please include iron and manganese in the suite.

If you have any questions regarding this email, please contact me by cell phone (925-899-8926), at the SF office (415-955-9040), or via email.

Thank you!

Project:	2893.12
Location:	BBDA4
Request Date:	10/07/04
Samples Received:	10/07/04

This hardcopy data package contains sample and QC results for nine soil samples, requested for the above referenced project on 10/07/04. The samples were received cold and intact.

Metals (EPA 6010B and EPA 7470A):

Low recoveries were observed for antimony in the MS/MSD for batch 95280; the parent sample was not a project sample, the BS/BSD were within limits, and the associated RPD was within limits. High recoveries were observed for copper, nickel, and vanadium; the BS/BSD were within limits, and the associated RPDs were within limits.

Low recoveries were observed for copper, nickel, and antimony in the MS/MSD for batch 95280; the parent sample was not a project sample, the BS/BSD were within limits, and the associated RPDs were within limits.

Low recoveries were observed for many analytes in the MS/MSD for batch 95280; the parent sample was not a project sample, the BS/BSD were within limits, and the associated RPDs were within limits.

Low recoveries were observed for many analytes in the MS/MSD for batch 95280; the parent sample was not a project sample, the BS/BSD were within limits, and the associated RPDs were within limits.

Response exceeding the instrument's linear ranges were observed for iron, manganese, and zinc in the MS/MSD for batch 95280.

High % difference was observed for beryllium in the serial dilution for batch 95280.

No other analytical problems were encountered.
